

Machine type W+D 627

Special safety operation mode

Brief description

A special operation mode for the safety guards in the aligner section and the cutting tower allows the adjuster to open the safety guards while the machine is running. In addition, the waste gate guide carriage in the seal flap gumming area can be removed and the gum box engaged while the machine is running at ground speed.

Description of modification

With the use of the manual push button wand, it is possible to open the safety guard on the aligner section for two minutes to view machine operation with the stroboscope while the machine is running. This operation is also possible on the cutting tower. In the seal flap gumming section, there is a 20 second window to remove the waste gate utilized during machine set-up and pivot the gum box into position for production without stopping the machine.

Advantages

- / Operational safety approved by the German Accident Prevention Association
- / Envelope folding can be viewed with a strobe while machine is running

Machine requirements

Valid from: S/N 13210 to 15621

Manual control switch
