

Retrofit for Maschine type W+D 627

2nd Cutting Section

Short Description

Installation of a second cutting section for the complete cut using an EasyCut magnetic roller

Description of the Measure

A second cutting section with a 300 mm or 460 mm wide magnetic roller is installed in addition to the existing window cutting section. This second cutting section makes it possible to cut out the envelope size from rectangular sheets using cost-effective foil knives. Both the envelope size and the window can be cut in one operation. The existing cutting section can still be used to cut the windows – this is an advantage when the window size changes several times while the format remains the same.

Second cutting section for complete cut

Benefits

- / Faster size changes
- / Increased machine productivity thanks to the complete cut using foil knives
- / Use of cost-effective foil knives
- / Processing of rectangular sheets
- / Elimination of the punching process to cut the blanks
- / Easy positioning of the foil knives
- / Increased flexibility
- / Minimized vacuum consumption at the highest intensity thanks to patented multi-valve technology

Winkler+Dünnebier GmbH (W+D), part of global equipment manufacturer Barry-Wehmiller and its BW Converting Solutions platform of five industry leading brands, specializes in the design and manufacture of high-performance converting machinery for the tissue, nonwovens, hygiene, package-printing and bag-converting industries worldwide.

With more than 100 years of experience, W+D is the only engineering company to cover the entire envelope mail production value chain: from converting, printing and value ad enhancement systems for the manufacturing of envelopes to highly intelligent mail inserting technology. All with the aim to produce the most complex and personalized letter mail packages for postal system intake. Whether you produce envelopes for transactional mail, direct mail, lightweight e-commerce or special packaging made of paper – we are your solutions partner.
